

Private Cloud Search Appliance

Find the information you need when you need it.

The world's fastest, most precise, most scalable search, powered by Fujitsu
PerfectSearch powered by Fujitsu delivers the ability to search up to 1 billion documents on a single server.

PerfectSearch powered by Fujitsu - Private Cloud Search Appliance

The PerfectSearch powered by Fujitsu Private Cloud Appliance combines the industry's leading search technology with Fujitsu's legendary server hardware. The result: Delivering the world's most powerful search on the most scalable and secure private cloud platform. While maintaining sub-millisecond response times, PerfectSearch's performance is 10 to 1,000 times faster than any other enterprise search technology.

SPEED: Index and search structured and unstructured data at blazing speeds.

PRECISION: Queries deliver precise results every search, every time.

SCALE: Use only a fraction of the hardware other solutions require.

SECURITY: Private cloud-based platform delivers robust security policies.

PERFORMANCE: Index and search up to a billion documents on a single server.

HYPER-FEDERATION: Seamlessly index disparate data across your enterprise into a single search query function.

RAPID DEPLOYMENT: Appliance platform means deployment time is fast.

GREEN: Less hardware means less power consumption, resulting in lower costs.

Leveraging Fujitsu's NuVola Private Cloud Platform, PerfectSearch hyper-federates enterprise data and content to create a single, optimized real-time index delivering incredibly high-speed, latency-free search and data retrieval.

Companies can quickly and cost-effectively access business-critical information from both structured and unstructured data sets across the enterprise.

Private Cloud Search Appliance

PerfectSearch powered by Fujitsu

We're in the midst of a digital information explosion, with data doubling every 18 months. Companies and organizations that are struggling to efficiently and cost effectively search and retrieve data with speed and precision now have an answer, the PerfectSearch powered by Fujitsu Private Cloud Appliance.

SOLUTION

The PerfectSearch powered by Fujitsu Private Cloud Appliance economically performs massive enterprise-wide searches with blazing speeds, delivering results with bulls-eye precision.

PERFORMANCE

The industry's most powerful enterprise search solution, the PerfectSearch Appliance is 10 to 1,000 times faster and more scalable than other search technologies. Our evolutionary software innovation enables the world's fastest search, requiring far fewer hardware resources. Companies and organizations can quickly and cost-effectively conduct massive enterprise-wide searches, equally accessing both structured and unstructured data sets, including data bases, email, content management repositories and over 100 file types.

COST SAVINGS

Patented software innovation enables search up to a billion documents using a single appliance. Compared to other solutions that can require more than 10 times the number of servers, PerfectSearch powered by Fujitsu offers a solution that is both powerful and economical—even compared to open-source solutions, with low equipment cost, fewer servers reduce energy and replacement costs. Companies now have a cost-effective solution to index and search all content is searchable with a single query. Source data can be retained in a repository or in the search system itself. These innovations built into the solution permit high-speed retrieval, drastically reduced hardware footprints, and extensive customization.

MULTIPLE APPLICATION CONNECTIVITY

In addition to most standard file types, PerfectSearch powered by Fujitsu offers connectors for Oracle, MS SQL Server, MySQL, IBM DB2, Informix databases, and more. By supporting Outlook Exchange and Lotus Notes, it offers a cost effective solution when sorting through hundreds of millions of emails. In addition, Sharepoint, Documentum and HP Trim content management system files are supported.

HIGH SCALABILITY

PerfectSearch powered by Fujitsu provides the technology to search 1 billion documents with a single server. Employing unique technology that uses disk based indexing rather than memory, requiring a fraction of the hardware—realizing up to a 90% reduction in search-related hardware. There is room to grow without having to add additional hardware. Firms that are struggling with ever-increasing data sizes now have a solution to easily and cost-effectively search content repositories.

PerfectSearch powered by Fujitsu Private Cloud Search Appliance System Configurations

<u>Small</u>	100 GB	25M Records	25 QPS
<u>Medium</u>	500 GB	100M Records	30 QPS
<u>Large</u>	1 TB	500M Records	50 QPS
<u>Enterprise</u>	5 TB	1B Records	50 QPS

Feature

Benefit

High Speed Queries	Up to 50 QPS – significantly increases search speed over traditional solutions
High Search Precision	Innovative, patented software technology provides high query precision and recall, enabling users to find the information they need when they need it
Affordable Scalability	Reduces number of costly servers (energy and replacement cost savings) and offers room to grow; provides the ability to affordably search ALL content
Hyper-federation	Search across multiple data repositories and platforms to create a single optimized index searchable with a single query
Plug & Play	Easy to install and use with minimal learning curve
Pricing	Based on total data size
